The New Fermator Paint Colour ... for Primed Epoxy Finish Doors

Applies to all Door Orders Delivered from September 2009

*In the pursuit of continuous improvement and in response to positive market research, Fermator have changed their standard Primed Epoxy Finish (RAL 7010) to **Pebble Grey RAL 7032**.*

This new Ivory Cream shade is more suitable to current decorative trends and can be used as a final finish or can be easily painted over to your Client's choice.

Please note: All Fermator doors/entrances ordered as "Primed Epoxy Finish" due for delivery during the month of September onwards will be supplied in this new finish.

Fermator can also supply doors/entrances in other Special Order paint colours. Please contact the Sales Department for further details or click on the link below for our RAL Colour Chart.

We do still have a number of doors/entrances in the old RAL 7010 Finish held in stock at our warehouse so contact us for a bargain ... and don't forget the European August Shutdown, we could have the equipment in stock that you were too late to order!

(The old RAL 7010 colour finish will still be available from Fermator but as special order and at extra cost)
